

# Project Details

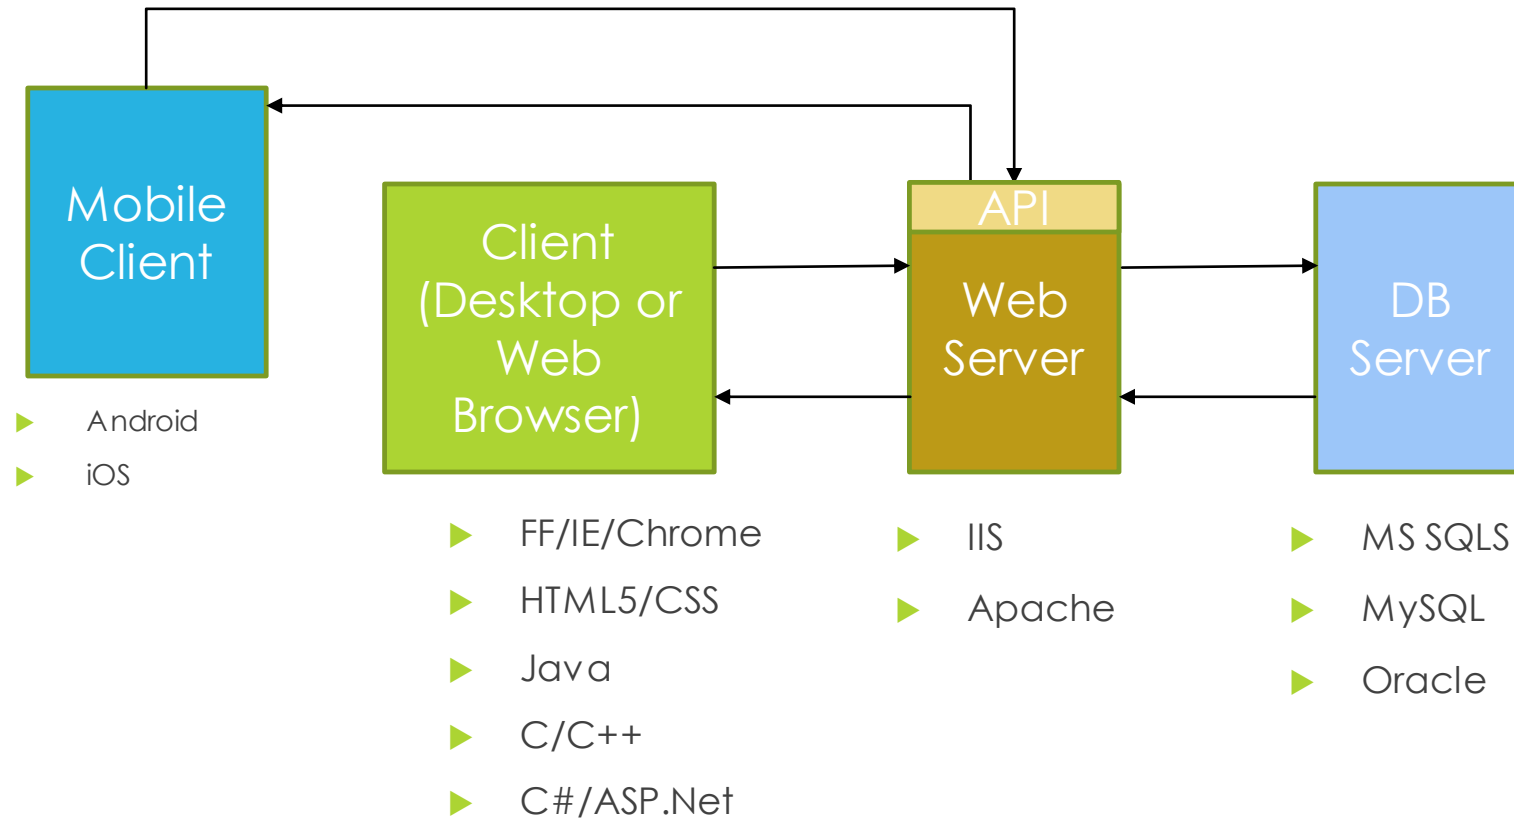

F19

L02

# Context

- ▶ Students right out of their undergraduate programs are hired based on potential, not necessarily expertise
- ▶ This project should push you outside your comfort zone
- ▶ This project should push you to learn new skills
- ▶ This project should push you to solve problems on your own
- ▶ This is what you'll be expected to do!

# 3 Tier Architecture

# Project Requirements

- ▶ Every implementation will include
  - ▶ A Web/Desktop Application w/GUI
  - ▶ Connecting to a Database
  - ▶ Skills showcase
- ▶ Focus on the first 2 areas to get started
- ▶ Your team does not have to build a web application, but that is a natural path to a solution

# Project Requirements

- ▶ Every implementation will
  - ▶ Be managed using Agile Project Management
    - ▶ via Microsoft Azure Dev Ops
  - ▶ Use GIT for configuration control

# Good (Truck) Driver Incentive Program

- ▶ Rewarding truck drivers for good behavior
- ▶ There are three types of users in the system
  - ▶ Drivers
  - ▶ Sponsors
  - ▶ Administrators
- ▶ Each type of user has
  - ▶ operations specific to their type
  - ▶ operations that overlap

# Drivers-1

- ▶ earn points for good driving behavior
- ▶ are affiliated with one sponsor company (ie a 1-1 DB relationship)
- ▶ use the points to purchase products from their sponsor's product catalog
- ▶ points are added on a daily basis for good driving behavior
- ▶ can use their points at any time to purchase items in their sponsor's catalog

# Drivers-2

- ▶ can log in
- ▶ can review/update their user profile and password
- ▶ browse products in their sponsor company's catalog
- ▶ review their point status
- ▶ review the status of their purchases
- ▶ cancel/update purchases

# Sponsors-1

- ▶ Sponsors are companies that employ drivers and want to encourage good driving behavior
- ▶ Sponsor companies have a catalog of incentive products (G or PG only)
- ▶ The products are chosen via one of 3 mechanisms (which the sponsoring company selects and can change at any time)
  - ▶ list of specific products
  - ▶ general categories of products
  - ▶ rules for selecting products
- ▶ Set the dollar value of a driver point (\$0.01 per point is the default)
- ▶ Products have \$ values which translate into driver points

# Sponsors-2

- ▶ can log in
- ▶ review/update the sponsor and user profiles
- ▶ there can be multiple logins per sponsor
- ▶ review the status of their participating drivers
- ▶ approve or reject driver applications
- ▶ register/update driver information, including points and personal information
- ▶ review/update their product catalog
- ▶ “purchase” items on behalf of a driver
- ▶ update the rules for generating their product catalog

# Sponsor Product Catalog

- ▶ Use a web API (such as eBay or Amazon) to produce the company specific catalog of incentive products
  - ▶ product availability
  - ▶ price
  - ▶ description
  - ▶ images of the product, offers, offer availability
  - ▶ other relevant information
- ▶ Use the web API to obtain the current product price before a product is added to the drivers purchase set
- ▶ 1 driver point is equal to \$0.01
  - ▶ the \$ to point conversion is set by the sponsor
- ▶ The product catalogs are updated on a daily basis via the web API

# Administrators-1

- ▶ all products are sold & delivered via a third party
  - ▶ such as eBay or Amazon
- ▶ receives 1% of total sales amount each month
- ▶ generate reports to track fees and other operational parameters

# Administrators

- ▶ can log in
- ▶ review/update admin profile
- ▶ review/update the status of
  - ▶ all sponsor companies
  - ▶ all drivers
  - ▶ specific companies
  - ▶ specific drivers
- ▶ add new admins, drivers and sponsor

# General

- ▶ The incentive program app must be a responsive and conform to the size of the user's display
- ▶ Sensitive data in the system must be protected
- ▶ The app needs a password reset system for driver and sponsor users
- ▶ System must be deployed to our AWS cloud hosting environment

# Showcase Skills

- ▶ Team must select an area to go deeper, such as:
  - ▶ Database: use triggers, stored procedures, database jobs, user level access permissions
  - ▶ Security: site hardening, penetration testing
  - ▶ Testing: automated testing
  - ▶ GUI/HCC: advanced HTML, CSS & Javascript
  - ▶ Accessibility: accessible site, accessibility testing
  - ▶ Mobile app: native iOS or Android app
  - ▶ Deployment: continuous deployment, automated push
  - ▶ AWS: incorporate other AWS services
- ▶ Provide a summary and artifacts to illustrate your team's work as part of the final project demo

# Timeline – Week 1

- ▶ Week 1
  - ▶ Team Formation

# Timeline – Week 2

- ▶ Week 2
  - ▶ Project Review
    - ▶ Prepare team questions for the “client”
  - ▶ Technology & Skills Showcase Selection
    - ▶ Pick something your team knows
    - ▶ Or choose to learn a new technology
  - ▶ Database DDesign
  - ▶ Azure DevOps Setup
  - ▶ GIT Setup

# Timeline – Week 3

- ▶ Week 3
  - ▶ Initial Software Architecture
  - ▶ Populate the initial project backlog with user stories
  - ▶ Initial allocation of work to team members
  - ▶ Initial DB design (aka ERD)

# Timeline – Week 3

- ▶ Develop 250 User Stories for your initial backlog
  - ▶ We will cover user stories next week
- ▶ **THERE WILL BE NO CODING before...**
  - ▶ Features & Stories have been defined...and...
  - ▶ Backlog is officially approved!
- ▶ You should also have
  - ▶ UI Mock Up
  - ▶ DB ERD, which is your first review point
  - ▶ before you start coding

# Timeline – Weeks 4-13

- ▶ Weeks 4-13
  - ▶ AWS Setup (App Server & Database Server)
  - ▶ Code, test, demo, repeat
  - ▶ 1 weeksprints (except for Sprint 5) →
    - ▶ Maintain Backlog
    - ▶ Weekly SCRUM
    - ▶ Weekly Demo
  - ▶ Code *MUST* be branched every week
    - ▶ The demo must be done using the sprint branch

# Timeline – Weeks 4-13

- ▶ Keep your code up to date
  - ▶ If you check in code that does not build...your team mates WILL come looking for you
- ▶ Keep your story and task status up to date in Azure DevOps

# Timeline – Weeks 14-16

- ▶ Project Demonstrations
  - ▶ your team will demo your final product to the whole class
  - ▶ details to come
- ▶ Project Retrospective

# Software Architecture

- ▶ Design diagrams can be done with LucidCharts
  - ▶ ERD Diagrams
  - ▶ UI Mockups
  - ▶ Others...
- ▶ All design documents must be added as attachments to the appropriate feature or story

# Demos

- ▶ There will be weekly demos
- ▶ Stories should be selected to produce a demonstrable product by week 4
- ▶ Project should be capable of being demo'd from ANY team member's login
  - ▶ (which has DB implications)

# Deployment

- ▶ Develop locally on your laptop
- ▶ Your project should be deployed and running at AWS by Sprint 4
- ▶ Amazon Web Services (AWS) will be our deployment environment
  - ▶ (details to come)

# Team Rules

- ▶ This is a GROUP project...you must work together...and it may be painful!
  - ▶ your team will shape the final result!
- ▶ Each team will have scrum on Tuesday in Lab
- ▶ Each team will demo the last sprint every week
  - ▶ We will alternate demos in-class (W) and in Lab (Th)
  - ▶ When you demo in class...  
you and your team must attend class on Wednesday and use the time for team consultation and project development and other 4910 assignments
  - ▶ When you demo in class...  
you and your team must attend Lab on Thursday and use the time for team consultation and project development
- ▶ Minimize the interaction with the other teams

# Final Thoughts

- ▶ This is a VERY open-ended project
- ▶ You are expected to know or learn the technologies your team needs
- ▶ I am here to operate as the product owner for project questions and be your technology consultant
- ▶ Your TA will be your Scrum Master
- ▶ **So raise issues and ask questions...but the ultimate responsibility to figure things out is yours!**

# Next Steps-1

- ▶ For Next Time
  - ▶ Each team needs to
    - ▶ meet (in Lab)
    - ▶ compose 10 substantial clarification questions about the project specification  
These are due (1 submission per team) before next class
    - ▶ configure AzureDevOps/GIT  
See slides in Canvas for details

# Next Steps-2

- ▶ Next Class
  - ▶ Answers to the project questions will be posted to Canvas
  - ▶ It is your team's opportunity to ask questions & get clarifications
  - ▶ Configure AzureDevOps/Git
    - ▶ See slides in Canvas for details
  - ▶ Teamwork Guidance
